Eligibility Checklist for Expedited Solar Photovoltaic Permitting for One- and Two-Family Dwellings

GENERAL REQUIREMENTS

A. System size is 10 kW AC CEC rating or less
   - The solar array is roof-mounted on one- or two-family dwelling or accessory structure
B. No more than four photovoltaic module strings are connected to each Maximum Power Point Tracking (MPPT) input where source circuit fusing is included in the inverter
   1) No more than two strings per MPPT input where source circuit fusing is not included
   2) Fuses (if needed) are rated to the series fuse rating of the PV module
   3) No more than one noninverter-integrated DC combiner is utilized per inverter
C. The solar panel/module arrays will not exceed the maximum legal building height
D. Solar system is utility interactive and without battery storage
E. Permit application is completed and attached

ELECTRICAL REQUIREMENTS

A. For central inverter systems: No more than two inverters are utilized
B. The PV system is interconnected to a single-phase AC service panel of nominal 120/220 Vac with a bus bar rating of 225 A or less
C. The PV system is connected to the load side of the utility distribution equipment
D. A Solar PV Standard Plan and supporting documentation is completed and attached

STRUCTURAL REQUIREMENTS

A. A completed Structural Criteria and supporting documentation is attached

Required - If there are engineered trusses that will be drilled or modified per 802.10.4 of the CRC

FIRE SAFETY REQUIREMENTS

A. Clear access pathways provided
B. Fire classification solar system is provided
C. All required markings and labels are provided
D. A diagram of the roof layout of all panels, modules, clear access pathways and approximate locations of electrical disconnecting means and roof access points is completed and attached

Notes:
1. These criteria are intended for expedited solar permitting process.
2. If any items are checked NO, revise design to fit within Eligibility Checklist, otherwise permit application may go through standard process.
