Atascadero’s Rehabilitated Lake View Drive Ribbon Cutting Event
Thursday, May 19th, 12:30 p.m.

The City of Atascadero will hold a ribbon cutting event on Thursday, May 19th at 12:30 p.m. near the corner of Portola Road and Lake View Drive, for the official unveiling of the newly completed Lake View Drive Rehabilitation and Improvement Project.

Lake View Drive is a two-lane residential roadway next to Atascadero Lake with a high percentage of pedestrians who utilize the shoulder of the roadway as a recreational pathway.

The Lake View Drive Project incorporated several rehabilitation and improvement needs into a single improvement project. The roadway pavement had become weathered and included sections near Santa Rosa Road which were failing due to poor drainage and underlying soil conditions. The project scope included full pavement replacement and drainage improvements at the southern segment, an asphalt overlay throughout the project area, pavement restriping, addition of asphalt dikes and channels to reduce shoulder erosion, and improvements to the existing pathway to provide improved access for pedestrians to better enjoy the lakeside trail.

The City’s Public Works Department provided project oversight during the construction process and, according to Deputy Director Ryan Hayes, is very pleased with the work which was completed by Viborg Sand and Gravel. Although it was expected that the project would take two and half months to complete, everything was finished within just four weeks from start to finish. The City expresses appreciation for the patience and understanding of residents who were inconvenienced during construction, and is hopeful that residents and visitors will enjoy the new improvements.
